

Product development & Prototyping

 **LE.WORKS**

We'll help you develop your products

Our engineers will help you develop your product: making prototypes and working with the design for manufacturing. We can also help with product innovation within IoT.

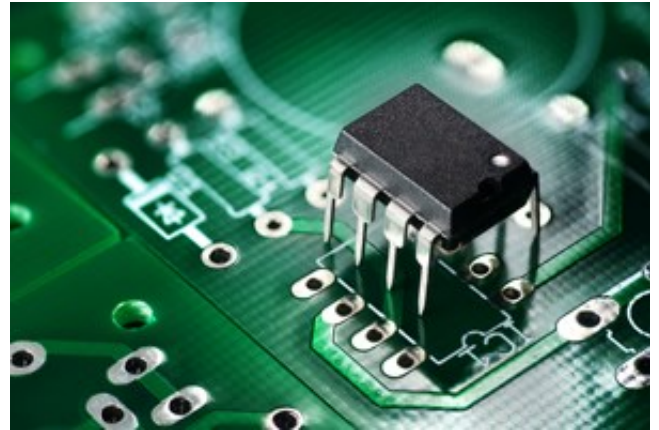

Mechanical engineering

The mechanical engineers work in CAD software and build structures and mechanical solutions in various materials.

Electronics and firmware

The electronic engineers can develop most type of electronic products, including PCB design and firmware programming.

Prototyping

The engineering team can develop prototypes and send to overseas customers.

Example projects

Our engineers have a long experience working with IoT development, as well as simpler products. Here are some examples.

Smart oven

The most sophisticated smart oven in the world, with custom cooking systems designed to be operated by a computer (instead of a human). The oven glass has a transparent touch screen and the system runs on a custom OS. Connected to the cloud..

Cloud based Covid-19 system

Custom thermometer and id scanners that sends test data to a cloud based reporting system, in real time. The system was developed for large organizations to handle the Covid-19 outbreak.

About LeWorks

LeWorks is a Swedish factory management company, based in Changzhou, China – a city next to Shanghai.

We started the company in response to the growing frustration that many companies experienced with unreliable sourcing and manufacturing, during Covid-19, when factory visits weren't possible.
